Eram Manasia

- A brief paragraph identifying the major theme the project aims to cover
  - My project would try to cover how poverty affects crime rates in New York City. I plan on first finding what parts of NY have the highest and lowest crime rates by using it for zipcode. And I will then find what is the average individual income of that zipcode. After finding the top 5 of both, I would compare it to each other. If there is a correlation, then I can answer the question that poverty does have an affect.
- A list of at least three potential questions the analysis will address
  - What parts of the NY have the highest crime rates(zip code)?
  - What is the individual income of these crime rate zip codes?
  - Does poverty actually affect crime rates?
- A data set that addresses those questions
  - https://catalog.data.gov/dataset/zip-code-data
  - https://www1.nyc.gov/site/nypd/stats/crime-statistics/park-crime-stats.page
- Four or more variables to be included in the project
  - Income
  - Zip Code
  - Person per household
  - Crime rate based on zip code
- Any concerns you are having about the data pull
  - Not sure which year to choose. Also may not be able to do it by zip code but just by towns.
